

Benefits

- **Improve speed to market** - IT services provisioning can be reduced from weeks to hours. The scalability of the cloud enables businesses to meet their demand.
- **Improve performance** – We integrate management capabilities, cloud software infrastructure services and extensive additional services that extend across the spectrum, from IaaS to platform as a service, delivered as a unified whole — integrated IaaS + PaaS.
- **Future innovation becomes easier** – Gartner believes that IT leaders should keep in mind that the most effective way to adopt cloud IaaS usually requires embracing DevOps, taking advantage of the provider's proprietary capabilities.
- **Add competitive advantage** - Research from the Cloud Industry Forum shows that despite the widespread adoption of cloud across all sectors and verticals, most companies feel that using cloud gives them an edge against their business rivals.
- **Drive down costs** - the cost of investment is reduced through on-demand self-service, so it democratizes any size business to launch global growth. Once a hybrid cloud infrastructure is in place, cloud resources can be automated, spun up and decommissioned quickly.

Cloud platforms are evolving from being a market disruptor to being mainstream as businesses take advantage of the benefits of agility, cost reduction, and simplification as well as Next Generation technologies such as infinite scalable storage, IoT and artificial intelligence.

Yet, IT organisations are grappling with the task of deciding the pace and order of which applications to take, to which type of cloud whilst also managing a mix of legacy, private, and public environments that provide security and resilience.

We see a shift in buyer patterns from private to public cloud, from self-service to managed and from VMs to containers. IT organisations should be equipped to take on the storm and the shift in buyer patterns.

Why You Should Act

We see 4 drivers in moving to the cloud.

Deadline

- Ageing infrastructure
- Colo contract coming up for renewal
- Data centre shutting down
- Increased risk of managing own infrastructure

Growth

- Business expansion & growth
- Running out of capacity

Strategy

- Agility in market, new locations and/or products
- Speed in gathering and mining data
- Lower upfront costs and/or TCO

Emergency

- Disaster recovery
- SAN has melted
- DDoS attacks
- DB Crumbled

How can we help

We provide end-to-end services from developing a holistic strategy through to implementing and managing multi-cloud environments.

Digital Infrastructure

- Identify the right cloud
- Migrate and deploying new applications to public
- Manage public, private and hybrid platforms

Security

- Identify requirements to connect securely to the cloud
- Design and implement secure connectivity solution
- Manage firewall and identity solutions

Backup, DR & High Availability

- Discover and assess backup, DR and HA requirements
- Design and implement solution to meet requirements
- Manage backup, DR and HA solutions

About Us

At Oreta, our motivation is to help organisations use technology to transform their business to be the best in their field.

Based in Australia, we provide cost effective value added cloud services. We leverage a mix of public and private cloud services, enhanced with an orchestration layer to deliver a complete and robust cloud service to every customer, every time.

We want to be the partner of choice for organisations empowering them to accelerate innovation, expand their market reach, and drive down their IT costs.

Our Values

Excellence

Relentlessly pursuing the highest level of performance.

Passion

Being the best at doing what we love.

Learning & Growth

Embracing continuous learning and development.
