

## Highlights

- **Exploit digital dexterity** – according to Citrix the growth in cloud service adoption is changing how employees access their work, swapping desktops for internet browsers. 75% of enterprise workloads are now run in the cloud. SaaS applications have created today’s work-from anywhere culture, giving workers the ability to access their workspaces from almost any device.
- **Boost performance** – moving from device centric to user centric support approaches gives users frictionless updates, it’s easier to use and much higher uptake of new features
- **Secure and collaborative environment** – utilising Single Sign On, having contextual security controls to a company’s policies and to the various user profiles and aligned to IT governance ensures greater confidence to collaborate

An effective digital workplace is crucial to succeeding in the digital economy.

Digital workplace is a business strategy for promoting employee agility and engagement through a more consumer-like computing environment.

It ensures that technology investments boost employee engagement through a focus on employee autonomy, continuous learning and effective collaboration.

By promoting employee engagement, a digital workplace stimulates discretionary contributions that, in turn, can boost business effectiveness.

## Why You Should Act

The digital workplace is the realm in which your organisation's workspace needs, investments and objectives will be realised. To enable new and more effective ways of working, organisations need to develop a digital workplace strategy to raise employee engagement and agility and exploit consumer-oriented styles and technologies.
